

# XYGATE® Identity Connector for SailPoint

Extend SailPoint IdentityIQ®  
to HPE Nonstop

## Overview

Many organizations struggle to provide users with timely appropriate access to critical business applications and IT systems—a fundamental requirement for operational efficiency and security. Existing access request and management processes are often manual, outdated, and disconnected from core business initiatives. Governance is frequently an afterthought, leaving enterprises exposed to unnecessary risk and potential non-compliance with internal policies and external regulations.

## Secure Account Management for HPE Nonstop

**XYGATE Identity Connector (XIC) for SailPoint** enables seamless integration between HPE Nonstop systems and your enterprise Identity & Access Management (IAM) solution. It allows SailPoint IdentityIQ to centrally govern, provision, and reconcile Nonstop user accounts alongside all other enterprise systems. Without centralized identity management, onboarding and offboarding becomes a manual, time-consuming process that increases security exposure. XIC streamlines and secures Nonstop access from a single, authoritative platform—enabling consistent governance and reduced risk across the user lifecycle.

### Key Features

- SCIM 2.0 Protocol Support
- Full account lifecycle actions (Add/Delete/Disable/Enable/Update)
- Lightweight microservice deployment
- Encrypted HTTPS/TLS communication
- Audit and activity logging
- Native integration with the XYGATE Security suite

### Key Benefits

- Centralized control of Nonstop identities via SailPoint
- Rapid detection of entitlement issues and access risk
- Automated provisioning and deprovisioning
- Enforced compliance with policies and regulations
- SailPoint-certified integration for proven compatibility

## Centralized Identity Management

### ➤ SailPoint–Certified Integration

XIC enables seamless provisioning of HPE Nonstop systems during onboarding through its certified integration with SailPoint. This centralized approach eliminates the need to manage Nonstop separately, simplifying identity management across the entire enterprise and ensuring consistent access control policies.

### ➤ Account Management

With XIC, administrators can perform full account lifecycle operations—such as create, delete, read, search, and enable/disable—directly from SailPoint. The solution fully supports HPE Nonstop user attributes, ensuring consistent identity governance and control across all enterprise systems.

### ➤ Instant Access Control

XIC allows administrators to instantly enable (thaw) or disable (freeze) HPE Nonstop user accounts directly from SailPoint. Access can be granted or revoked with a single click, supporting just-in-time provisioning and rapid response for emergency access revocation.

## Easiest Deployment Integration

### ➤ Easy Deployment

XIC is a lightweight microservice that deploys in minutes with minimal setup. The configuration is simple; XML files can be used without complex platform dependencies. It runs seamlessly on HPE Nonstop, Linux, or Windows via JVM.

### ➤ Secure Communication

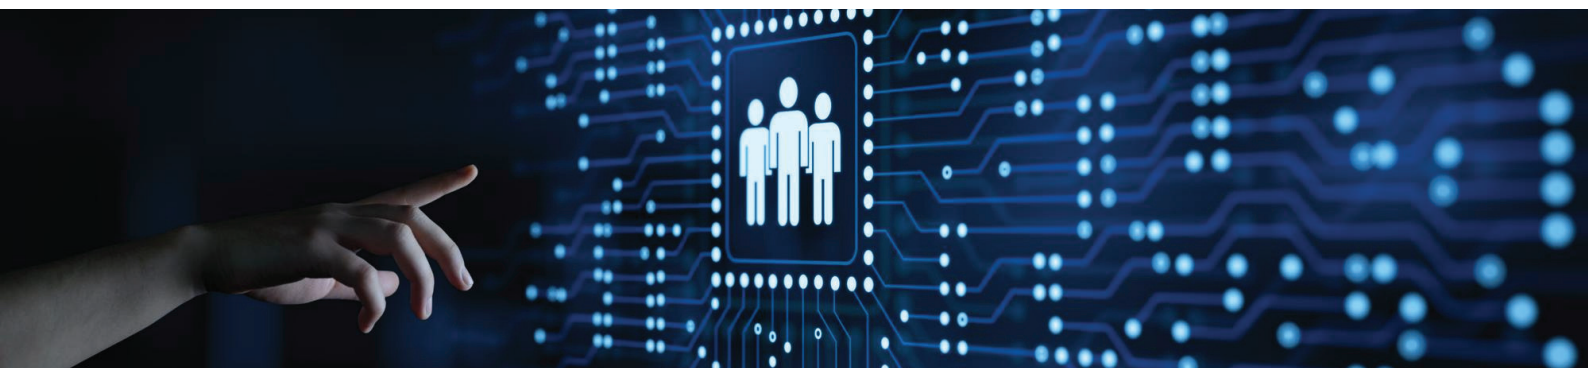

XIC uses HTTPS, JSON, and SSL/TLS protocols to ensure secure, standards-based interaction. It is fully compliant with SCIM 2.0 for identity data exchange, enabling encrypted communication through enterprise identity platforms.

### ➤ Auditing & SIEM Integration

XIC logs all access requests, capturing who performed each action, when and where it occurred. Audit data integrates seamlessly with XYGATE Merged Audit and enterprise SIEM tools, enabling complete audit trails and streamlined compliance reporting.

### ➤ Provision & Deprovision

User provisioning is fully managed within SailPoint, with Nonstop-specific attributes configurable and passed seamlessly through XIC. This eliminates manual, error-prone account setup, ensuring consistent and efficient identity lifecycle management.
